A book and a pencil are pressed onto your palm with the same force. Why does the pencil tip hurt more?

- A** The pencil is heavier than the book
- B** The same force acts on a much smaller area, so the pressure is greater
- C** The pencil pushes with a bigger force
- D** The book spreads the force over a smaller area

A shoe sole covers 150 cm^2 . What is this area in square metres?

A 1.5 m^2

B 0.15 m^2

C 0.015 m^2

D 15 m^2

A maize bag on a pallet pushes 225 N onto each leg. Each leg touches the floor over 0.0025 m^2 , so the pressure is 90 000 _____. Which unit completes the answer?

- A Newtons (N)
- B Pascals (Pa), which are N/m^2
- C Kilograms (kg)
- D Square metres (m^2)

A rungu tip (2 cm^2) and a crutch base (50 cm^2) each press down with 150 N. Which statement is correct?

- A** They exert the same pressure because the force is the same
- B** The crutch exerts higher pressure because it is larger
- C** The rungu exerts higher pressure because its area is smaller
- D** Neither exerts pressure because they are not moving

In which directions does atmospheric pressure push on the jerrycan?

- A** Only downward, on the top
- B** Only on the sides
- C** Inward on every surface: top, bottom and all sides
- D** Outward from the inside only
