Lesson 6: Applying Binomial Nomenclature: Naming Our Local Organisms the Same Way Everywhere

7 multiple-choice questions • choose A, B, C or D

Sub-Strand 1.1: Taxonomy I | Lesson 6

In Kenya, maize is called 'mahindi' in Kiswahili, 'mbembe' in Kikuyu and 'oganda' in Luo. Why is this a problem for scientists who share information with scientists in other countries?

- A** Only English names can be used for plants
- B** Local names are wrong and must never be used
- C** Different languages use different names, so people may not know they are talking about the same organism
- D** Maize has too many parts to be named

A learner types the scientific name of maize. Which way follows the rules for writing a scientific name (ignoring italics)?

A Zea mays

B Zea Mays

C zea mays

D zea Mays

You are writing the scientific name of the goat, *Capra hircus*, by hand in your exercise book. How should you show that it is a scientific name?

- A** Draw one long line under both words together
- B** Underline *Capra* and *hircus* separately, each with its own line
- C** Put the name in brackets and do not underline
- D** Write both words in capital letters

A group is matching scientific names to organism cards. Which organism is correctly matched with the scientific name *Phaseolus vulgaris*?

A Bean plant

B Mosquito

C Goat

D Maize

A learner writes the scientific name of the goat as 'Capra Hircus'. What is wrong with it?

- A** Both words should start with a small letter
- B** The genus should start with a small letter
- C** The species 'Hircus' should start with a small letter
- D** Scientific names should be written in English

A learner writes a Claim-Evidence-Reasoning answer claiming that Zea mays is a better name for scientists than mahindi, mbembe or oganda. Which reasoning best supports the claim?

- A** The same two-part name is used worldwide, so everyone can identify the same organism
- B** Zea mays is shorter and easier to say than the local names
- C** Local names are incorrect and should not be used
- D** Zea mays is older than all the local names

In a class debate, a learner says: 'Local names are not important when we have scientific names.' Which response is best?

- A** Agree, because local names are always wrong
- B** Disagree, because local names are never used in science
- C** Agree, because scientific names replace local names
- D** Disagree, because local names such as mbembe and oganda have cultural and practical value, while scientific names allow worldwide communication
