Lesson 8: Classification into the Five Kingdoms and Importance of Taxonomy: Our Final Explanation

8 multiple-choice questions • choose A, B, C or D

Sub-Strand 1.1: Taxonomy I | Lesson 8

A single-celled organism from a pond has a nucleus, moves using temporary extensions of its body (pseudopodia) and takes in food particles. Which kingdom does it belong to?

A Fungi

B Plantae

C Monera

D Protocista

A mushroom grows in soil. It has no chlorophyll and absorbs food from decaying matter. Which kingdom does it belong to, and why?

- A** Animalia, because it cannot make its own food
- B** Plantae, because it grows in soil
- C** Fungi, because it has no chlorophyll and absorbs nutrients from its surroundings
- D** Protocista, because it has no leaves or roots

Which of these is the correct way to write the binomial name of maize?

A Zea Mays

B zea Mays

C zea mays

D Zea mays

Which list shows the taxonomic ranks in the correct order, from the largest group to the smallest group?

- A** Kingdom, Class, Phylum, Order, Family, Genus, Species
- B** Kingdom, Phylum, Order, Class, Family, Genus, Species
- C** Kingdom, Phylum, Class, Order, Family, Genus, Species
- D** Kingdom, Phylum, Class, Order, Genus, Family, Species

A learner says, "Spirogyra is an animal because it lives in water." Which response is the best scientific reply?

- A** Correct, because all organisms in water are animals.
- B** Correct, because Spirogyra is too small to be a plant.
- C** Wrong, because anything green must be a plant.
- D** Habitat is not a reliable rule. We should use observable features such as cell type, chlorophyll and mode of nutrition.

Maize is called mahindi in Kiswahili, bhutta in some communities and corn in English. Why do scientists also give it one scientific name, *Zea mays*?

- A** One two-part name can be understood by scientists everywhere, whatever the local name.
- B** Local names are wrong and must be replaced.
- C** The scientific name tells where the plant grows.
- D** Scientific names are always shorter than local names.

Why is correct identification and naming of organisms important for conserving biodiversity in forests such as Kakamega Forest?

- A** It stops species from changing over time.
- B** It lets scientists know which species are present and which are rare, so they can protect them.
- C** It makes all species belong to the same kingdom.
- D** It means only the species useful to people need to be protected.

Which statement best describes taxonomy?

- A** Giving organisms local names in different languages
- B** Grouping organisms only by where they live
- C** The science of classifying, naming and identifying living organisms
- D** The study of how organisms interact with their environment
