Lesson 1: Frogs, Hens and Cows: Many Ways to One Goal – How Do Animals Reproduce?

7 multiple-choice questions • choose A, B, C or D

Sub-Strand 3.1: Reproduction in Animals | Lesson 1

Near Kisumu, a learner looks at frogspawn in a pond and a hen's egg in a nest. Which statement correctly describes what is seen?

- A** Both frog eggs and hen's eggs are hard-shelled and laid on land.
- B** Frog eggs are covered in jelly and released into water, while a hen's egg is hard-shelled and laid on land.
- C** Frog eggs are hard-shelled and laid on land, while a hen's egg is covered in jelly and released into water.
- D** Both frog eggs and hen's eggs are covered in jelly and released into water.

A learner claims that 'all animals lay eggs'. Which animal from the lesson photos does NOT fit this claim?

A A frog in a pond near Kisumu

B A cow with her calf

C A tilapia in Lake Victoria

D A hen sitting on her eggs

Which statement matches what is described about the number of young in the anchoring phenomenon?

- A** A frog gives birth to a few live young, while a cow lays one hard-shelled egg.
- B** A cow lays thousands of eggs, while a frog gives birth to one live calf.
- C** A frog releases thousands of eggs into water, while a cow gives birth to one live calf after months of development inside her.
- D** A frog and a cow both produce thousands of young at one time.

Your group is going to observe frogspawn at the edge of a school pond. Which rule is correct?

- A** Collect the spawn in your pockets so you can study it in class.
- B** Wade into the pond and pick up the spawn to count the eggs.
- C** Touch the spawn with bare hands, but only for a short time.
- D** Observe from the edge, do not touch the spawn with bare hands, and wash your hands afterwards.

A group is filling in its Part A observation table for frog spawn. Which entry is an observation, not an explanation?

- A** Water helps the sperm to reach the eggs.
- B** The eggs are released into the water and are surrounded by a jelly layer.
- C** The jelly stops the eggs from drying out.
- D** Frogs need thousands of eggs because many are eaten.

In Part B, a group sorts a hen and a cow on the classification chart. Which placement is correct?

- A** Hen: ovoviviparous; cow: oviparous
- B** Hen: oviparous (eggs laid, development outside the body); cow: viviparous (young develop inside the mother and are born live)
- C** Hen: viviparous; cow: ovoviviparous
- D** Hen: viviparous; cow: oviparous

A source says that in a female guppy the eggs develop and hatch inside her body, and she does not feed them through a placenta-type connection. In which column should the group place the guppy?

- A** Ovoviviparous, because eggs develop and hatch inside her body without placenta-type feeding
- B** Oviparous, because the eggs hatch
- C** Viviparous, because the young develop inside her
- D** Oviparous, because it produces eggs
